V-ZUG AG

Our new four-tier classification of flooring systems – from light to very heavy loads – enabled us to meet the precise coating requirements at V-ZUG's facility in Zug. However, this was anything but a standard project – explore a real-world case study involving expert advice and bespoke solutions.

Facts

Area	Painters / Decorators
Location	6302 Zug
Year of construction	2022
Endclient	V-ZUG AG

Project details

At its 61,000 m² facility in Zug, V-ZUG produces high-tech household appliances with exceptional precision. As part of an ongoing modernisation programme, various floor areas at the site were renovated – from moderately used zones such as entrances, cafeterias and offices to high-stress production spaces.

The flooring in the production areas needed to withstand harsh chemicals, lubricants and the constant strain of heavy transport vehicles. Following an intensive deep clean, the soft anhydrite screed was reinforced using the solvent-free 2-component primer resin **EP-Floorline 110** and broadcast with quartz sand to achieve R11 slip resistance. The top coat was applied using **EP-Floorline 310**.

The less heavily used office and break areas were treated with the 2-component zinc phosphate primer **DEP 100-20** and coated with the water-dilutable **PUR Floorline Aqua** – for an attractive, durable and long-lasting finish.

You can read more about this project here or in issue 2/23 of applica.
